

GRANITE SIGNAL SYSTEMS

MASTER BUSINESS EXECUTION PLAN - V2.0 | NH SALES + PROFIT EDITION

New Hampshire | Managed AI lead response, appointment routing, client acquisition and profit plan for local service businesses

THE BUSINESS IN ONE SENTENCE

Install and manage a system that responds to a contractor's own inbound inquiries, gathers approved job details, and moves qualified prospects to an estimate or callback - while the contractor remains responsible for prices, safety and final decisions.

Written for a complete beginner. Read the START HERE pages first; then follow the numbered steps.

Working brand: GRANITE SIGNAL SYSTEMS

Public web searching found no obvious exact-match business. Before filing, confirm name availability in NH QuickStart and conduct an appropriate trademark search. This document does not itself clear the name legally.

Prepared August 20, 2026

TABLE OF CONTENTS

START HERE The first purchases and first actions

- 1** What this business actually does
- 2** Why clients pay you even if they already use AI
- 3** Legal/compliance model - keeping the business clean
- 4** Exact offer and pricing
- 5** Master road map - 30 / 90 / 180 days
- 6** New Hampshire company setup
- 7** Exact software and subscriptions - BUY THIS
- 8** What each AI/model does
- 9** Set up every account from zero
- 10** Exact information you must collect from every client
- 11** Build the HighLevel system step by step
- 12** Exact AI model choices, prompts and guardrails
- 13** The homeowner/lead conversation automation
- 14** Testing before any real person is contacted
- 15** NH sales machine - exact targeting, emails, calls and close
- 16** NH territory strategy and live prospect examples
- 17** Exact operating calendar + 30-client conversion math
- 18** Client onboarding and launch
- 19** Daily/weekly operation
- 20** Profit model, take-home scenarios and scaling
- 21** What can go wrong
- 22** Source and verification notes

START HERE. Do these 12 things in order.

Do not skip ahead to mass outreach. The system is simple if you build one layer at a time.

1. Search Granite Signal Systems in NH QuickStart. If the name clears, file the New Hampshire LLC.
2. Apply for the EIN directly through the IRS after the LLC exists.
3. Open a separate business bank account.
4. Buy one domain and one professional business mailbox.
5. Subscribe to ChatGPT Plus (\$20/month in the U.S.).
6. Subscribe to HighLevel Starter (\$97/month). Do NOT buy the \$297 or \$497 plan yet.
7. Create one demo sub-account in HighLevel. Use pay-per-use AI while testing.
8. Build one web-form lead-response demo. Do NOT start with AI voice or mass text campaigns.
9. Have a lawyer review your client agreement and the SMS consent/use case before the first live automated consumer messaging.
10. Create one one-page website and one 2-3 minute screen-recorded demo.
11. Build 12 hand-researched A/B prospects per weekday and run the exact email + call sequence in Section 15.
12. Close one pilot, prove the workflow, collect a testimonial/case study with permission, then use the measured results to scale outreach.

THE CORE SAFETY RULE

Your company sells business-to-business. The automation contacts the contractor's own inbound leads/customers only under an approved consent/use-case framework.

Do not buy lists of homeowners. Do not scrape mobile numbers. Do not cold-text consumers. Keep AI voice OFF at launch.

1. What this business actually does

Ignore the buzzwords. This is a managed follow-up system.

A tree company, roofer or similar contractor is often working in the field. A homeowner calls, submits a form, or asks for an estimate while nobody is available to respond. Some of those inquiries cool off or are handled inconsistently.

Granite Signal Systems installs the process that sits between the incoming inquiry and the human contractor.

THE FLOW

Homeowner submits an approved inquiry -> HighLevel creates the contact -> automated acknowledgement -> AI asks only approved questions -> information is saved -> estimate/callback is booked or a human task is created -> contractor takes over.

You are NOT selling leads.

- You do not generate the homeowner's interest.
- You do not resell Angi/HomeAdvisor leads.
- You do not promise a number of jobs.
- You improve the speed and consistency with which a business handles inquiries it already receives.

Launch niche

Launch order: TREE SERVICES and SEPTIC/DRAIN first; HVAC/PLUMBING next; ROOFING/EXTERIORS after the first proof. These niches combine field-based crews, meaningful job values, time-sensitive inquiries and simple first-step qualification.

2. Why clients pay you even if they already use AI

Do not sell "AI." Sell a managed intake operation that is faster, more consistent and less fragile than an owner trying to bolt together tools between jobs. The technology is available to the client; the implementation, monitoring and accountability are the product.

What Granite Signal Systems actually owns

The owner can technically do this	Granite Signal Systems does it as a managed service
Buy ChatGPT/CRM software	Select the stack, configure the client location, permissions, phone/email channels and workflows.
Write a chatbot prompt	Convert the owner's real services, service area, hours, exclusions and escalation rules into controlled instructions.
Connect a form	Map every field, capture lead source/consent, create pipeline stages, alerts, callback tasks and calendar routing.
Turn on an AI agent	Run a formal test set: pricing pressure, emergencies, out-of-area jobs, STOP requests, angry customers and ambiguous requests.
Read messages occasionally	Monitor failures, opt-outs, handoffs and sample transcripts; fix drift and update rules as the business changes.
Use Jobber/Housecall/another CRM	Integrate around the existing stack where possible instead of forcing a rip-and-replace.
Answer leads later from a truck	Give each approved inbound inquiry an immediate first response and collect the basics while intent is still high.

The pain you are selling

- The owner is on a roof, in a bucket truck, in a basement, driving, or talking to a customer when the next inquiry arrives.
- The business may have a contact form and a CRM yet still lack a reliable first-5-minute process, after-hours coverage, structured qualification and follow-up accountability.
- A receptionist or spouse may answer many calls, but evenings, weekends, vacations, storms and simultaneous calls create gaps.
- A generic AI tool does not know the company's actual service radius, safe handoff rules, calendar capacity, opt-out rules or what information the owner wants before calling back.
- The owner usually does not want another software project. They want fewer missed opportunities and cleaner information waiting for them.

THE POSITIONING LINE

"You are not paying me for access to AI. You are paying me to install, test and manage the intake system around your business so you do not have to build and babysit it yourself."

Why response speed is commercially meaningful

Classic lead-response research found a steep decline in qualification odds as response time increases. Harvard Business Review reported that firms attempting contact within an hour were nearly seven times as likely to qualify a web lead as firms waiting even an hour longer; earlier Lead Response Management research found much stronger odds within the first five minutes than at 30 minutes. Those studies are not NH-contractor guarantees, but they support the underlying operating principle: respond while the prospect is still actively looking.

NH fit

New Hampshire has a large homeowner base: Census QuickFacts currently reports a 72.8% owner-occupied housing rate, a \$402,500 median owner-occupied home value and \$99,031 median household income (2020-2024 estimates). That does not guarantee sales, but it supports a substantial market for home-service work. The local advantage is access: in smaller towns, the decision maker is often the owner, not a regional marketing department.

WHEN THE CLIENT DOES NOT NEED YOU

If they already respond to nearly every inbound inquiry within minutes, have reliable after-hours coverage, use a mature CRM/dispatch process, track every lead and have no intake pain, tell them you probably cannot add enough value. Disqualifying bad fits makes the pitch more credible.

3. Legal/compliance model - keeping the business clean

Business planning information, not legal advice. Have counsel review the real implementation.

The model is not inherently a legal gray area. The risk appears when people use automated texting/voice carelessly. This plan deliberately avoids the aggressive version.

Area	Launch rule
Your contractor outreach	Manual B2B email and live business calls. Follow CAN-SPAM for commercial email.
Homeowner SMS	Only within the client's approved messaging program and documented opt-in/use case. Use A2P 10DLC for U.S. 10-digit business texting.
Web forms	Use an unchecked consent checkbox and required disclosures appropriate to the message type. Marketing and non-marketing consent must be separated where required.
Missed-call text-back	Do not activate blindly. Have counsel approve the client's use case/message first.
Old/dormant leads	NOT a launch offer. Only use later when the client can document a lawful basis/consent and counsel has reviewed the campaign.
AI voice	OFF at launch. FCC treats current AI-generated human voices as artificial/prerecorded voice technology under TCPA rules.

Safety/pricing	AI never gives binding quotes or makes emergency, structural, electrical, insurance, legal or safety decisions.
Identity	AI never claims to be a human employee. It identifies the actual business and, if asked, truthfully says it is an automated assistant.

Client agreement must say

- Client owns/controls its leads and is responsible for the legal basis to contact them.
- Client approves scripts, channels and use cases before activation.
- Client will not upload scraped consumer lists.
- Client remains responsible for quotes, work, safety, licenses, warranties and customer promises.
- No guarantee of leads, revenue, closed jobs or appointment volume.
- Opt-outs must be honored and suppression records maintained.
- Data access, security, retention, breach/incident handling and third-party vendors are addressed.

4. Exact offer and pricing

Product name: GRANITE SIGNAL LEAD RESPONSE SYSTEM

Sell one standardized result: faster, structured handling of the client's own inbound requests. Do not sell a menu of random AI services.

What every standard client receives

Component	What the client gets
Inbound response layer	Immediate acknowledgment for approved web inquiries; missed-call follow-up can be added only after the client's use case and consent process are reviewed.
Qualification	Service, town/ZIP, short problem description, urgency, preferred contact time and optional photo request.
Routing	Estimate booking where appropriate, otherwise a clean callback task and owner notification.
Guardrails	No binding quote, no unsafe diagnosis, no invented availability, automatic human handoff for emergencies/uncertainty.
CRM visibility	Every inquiry moves through a visible pipeline instead of disappearing in voicemail, email or memory.
Monitoring	Failure review, opt-out review, transcript sampling, one controlled improvement at a time.
Monthly proof	Response metrics, conversations, bookings/callbacks, handoffs, errors and changes made.

Pricing - use this ladder

Stage	Setup	Monthly	Use
Founding pilots #1-3	\$300	\$397 for first 30 days; \$497/mo if continued	Low-friction proof. One channel. Cancel after pilot. Client usage over allowance can be passed through.
Core clients #4-10	\$750	\$697/mo	Standard package after the first working case study.
Proven package #11+	\$1,000	\$797/mo	Use once onboarding is templated and the value proposition is proven. Add \$100-\$200 only for materially more channels/complexity.

Stage	Setup	Monthly	Use
IMPLEMENTATION GUARANTEE - NOT A REVENUE GUARANTEE Put this in the order form only after lawyer review: "If Granite Signal Systems cannot get the agreed launch workflow to pass the written acceptance tests within 14 days after the client provides all required access, approvals and business information, Granite will continue remediation at no additional setup charge or refund the setup fee. No number of leads, appointments, jobs or revenue is guaranteed."			

Economic fit gate

- Minimum useful lead flow: roughly 20+ meaningful inbound inquiries/month is ideal; 10-20 can still work when job values are high.
- Minimum economics: the client should plausibly earn more gross profit from one recovered/accelerated job than the monthly fee. Do not force a \$697 service onto a company whose average job is \$150.
- Best average job values: tree removals/land clearing, septic repair/install, HVAC replacement/repair, plumbing emergencies, roof replacement/repair, well/pump work and sitework.
- Avoid tiny low-ticket businesses with almost no inbound demand. They cannot save enough time or recover enough revenue to justify the system.

5. Master road map - 30 / 90 / 180 days

Period	Goal	Definition of done
Days 1-7	Company + demo	LLC/EIN/bank/email; HighLevel demo; basic form-response system works on your test phone.
Days 8-10	Sales-ready	Website, sales sheet, demo recording, lawyer review scheduled/completed.
Days 11-30	First pilot	Manual outreach; demos; one paying pilot is the target.
Days 31-60	Proof	1-3 clients, stable system, baseline metrics, one testimonial/case study with permission.
Days 61-90	Standardization	One tree-service template/snapshot; scripts; onboarding checklist; predictable support.
Months 4-6	Scale	Aim for 10-20 standardized clients only if quality remains controlled; add a VA for research/admin.

SCALING RULE

Do not scale a broken custom service. A new client should increasingly become: duplicate template -> enter approved business facts -> connect form/calendar -> test -> activate.

6. New Hampshire company setup

Current public requirements checked August 20, 2026; re-check at filing.

A. Form the LLC

1. Go to New Hampshire Secretary of State QuickStart.
2. Search Granite Signal Systems. If a confusingly similar name exists, stop and choose a backup before filing.
3. File a domestic NH LLC Certificate of Formation. The current NH SOS fee is \$100.
4. Use a qualifying registered-agent name and NH street address.
5. Save the stamped formation PDF and receipt.

B. EIN

1. After the LLC exists, apply directly through the IRS EIN service.
2. The IRS does not charge for the EIN.
3. Download and store the EIN confirmation.

C. Bank, accounting and records

- ☐ Separate business checking account.
- ☐ Separate business card.
- ☐ Bookkeeping categories for software, telecom, legal, advertising, contractors, insurance and processing fees.
- ☐ Save every receipt electronically.
- ☐ Ask a CPA/enrolled agent how much to set aside for federal and NH taxes.

D. Ongoing NH basics

Item	Action
Annual report	NH SOS says annual reports are due April 1 following the year of registration. Current report fee shown is \$100; late fee shown is \$50.
Tax	Use NH DRA and a tax professional for current BPT/BET filing thresholds and rates.
Home business	Check your town's zoning/home-occupation rules if operating from home.
Insurance	Obtain E&O/professional liability and cyber quotes before meaningful client data is flowing.

E. Documents you need

- ☐ Operating Agreement

- ☐ W-9
- ☐ Master Services Agreement - lawyer reviewed
- ☐ Statement of Work / Order Form
- ☐ Client Messaging & Consent Attestation
- ☐ Client Information Workbook
- ☐ Approved Scripts sheet
- ☐ Privacy/security/data clause
- ☐ Incident and opt-out log
- ☐ Monthly report template
- ☐ Invoice / payment authorization

7. Exact software and subscriptions - BUY THIS

This page is the shopping list. Do not improvise.

BUY NOW - BEFORE FIRST CLIENT

- 1) ChatGPT Plus - \$20/month.
- 2) HighLevel Starter - \$97/month.
- 3) Google Workspace Business Starter - one user/business mailbox; use the current U.S. checkout price (budget roughly \$7-\$8/month).
- 4) One domain - annual cost varies by registrar.
- 5) Stripe Standard - \$0 fixed monthly platform fee; processing fees apply.
- 6) Make Free - \$0. Create it only if you actually need an outside integration.

BUY ONLY WHEN A CLIENT IS SIGNED

HighLevel AI: start the demo on pay-per-use. For an active client location, use AI Employee Growth at \$50/month/location when that is simpler/predictable for your usage.

HighLevel local phone number: currently \$1.15/month per U.S./Canada local number, plus usage.

A2P 10DLC: registration/campaign fees are pass-through and depend on brand/use case. Verify the Trust Center immediately before submission.

DO NOT BUY AT LAUNCH

HighLevel \$297 Unlimited - wait until you need more than the Starter plan's 3 sub-accounts.

HighLevel \$497 Agency Pro - not needed to deliver this service.

OpenAI API - optional later; no need at launch.

Paid Make plan - not needed unless a real integration exceeds Free.

AI voice, ElevenLabs or a separate voice platform - not at launch.

Clay/Apollo bulk-outreach stack - not month one.

Current direct operating costs to understand

Item	Current public pricing / budget	What it means
ChatGPT Plus	\$20/month U.S.	Your own research/setup/troubleshooting assistant.
HighLevel Starter	\$97/month	Core CRM/workflow platform; currently up to 3 sub-accounts.

HighLevel AI Growth	\$50/month per enabled client location	1,000 Conversation AI responses/month plus included AI features; overages can be usage-billed.
HighLevel local number	\$1.15/month	One business number; messaging/calls billed separately.
SMS base rate	\$0.0079 outbound + \$0.0079 inbound per segment	Carrier fees are additional; long messages can be multiple segments.
A2P low-volume registration	Currently about \$24.50 one-time for Low Volume Standard	Trust Center prices can change; monthly campaign fee is separate.
A2P low-volume mixed use	Currently \$1.50/month campaign fee	Use case must actually qualify; do not choose a category just because it is cheaper.
Stripe Standard	\$0 setup/monthly platform fee; 2.9% + \$0.30 domestic card	Payment processing.
Make Free	1,000 credits/month	Optional glue for integrations not handled by HighLevel.

Pricing changes. Re-check HighLevel/Stripe/Make checkout or Trust Center on the day you buy.

8. What each AI/model does

The biggest beginner mistake is thinking every AI subscription is the same thing.

Thing	Use it for	Does it talk to homeowner leads?
ChatGPT Plus / GPT-5.6 Sol	You: research contractors, design workflows, write/inspect prompts, analyze failures, produce reports, troubleshoot.	NO - not by itself.
HighLevel Conversation AI	Live approved SMS/chat conversations inside each client's HighLevel location; qualification and appointment/callback routing.	YES - this is the launch customer-facing AI.
HighLevel GPT Workflow step	One-off text generation/classification/summarization inside a workflow. Default GPT-5 Mini is appropriate for routine tasks.	Only if you deliberately send its output.
OpenAI API	Later custom automations outside ChatGPT/HighLevel. Separate billing and separate API key.	OPTIONAL later.
Make	Moves data between systems when native HighLevel connections are insufficient.	NO - it is automation glue, not the chatbot.

Exact model choices

- FOR YOUR OWN WORK: ChatGPT Plus -> GPT-5.6 Sol, medium/high reasoning for research, system design, prompt review and difficult troubleshooting.
- FOR HIGHLEVEL WORKFLOW GPT STEPS: GPT-5 Mini. HighLevel currently makes GPT-5 Mini the default and it is much cheaper than full GPT-5 for routine drafting/classification.
- FOR HIGHLEVEL CONVERSATION AI: use HighLevel's current recommended/default Conversation AI model; where model choice is exposed and quality is adequate, prefer the Mini tier for ordinary contractor lead qualification.
- FOR OPTIONAL FUTURE OPENAI API: start with GPT-5.6 Luna for cheap routine extraction/classification; use GPT-5.6 Terra for nuanced exceptions; use Sol only when testing shows the cheaper model is not reliable enough.

VERY IMPORTANT

ChatGPT Plus and the OpenAI API are separate products. Your \$20 ChatGPT Plus subscription does not create API credits. You do not need an OpenAI API key for the launch stack described in this document.

9. Set up every account from zero

Do this in this order.

9A. ChatGPT

1. Create/login to ChatGPT.
2. Upgrade to Plus.
3. For business setup work, choose GPT-5.6 Sol when available in the model/effort selector.
4. Create one project/folder called Granite Signal Systems.
5. Keep four chats: Prospect Research; HighLevel Build; Client Configuration; Weekly QA.
6. Never paste passwords, full card data or unnecessary sensitive consumer information into prompts.

9B. HighLevel

1. Create a HighLevel Starter account.
2. Agency Settings: enter Granite Signal Systems business details.
3. Create Location #1: 'Granite Signal Demo - Tree Service'.
4. Do not create client locations before they sign.
5. Inside the demo, set the business profile, time zone America/New_York and a test calendar.
6. Use AI pay-per-use while building the demo.
7. When the first client signs, create Location #2 for that client. Keep all of that client's leads/data inside its own location.

9C. Google Workspace / business email

1. Buy a domain you control.
2. Create one mailbox such as hello@yourdomain or yourname@yourdomain.
3. Use this address for B2B outreach, invoices and client communication.
4. Add SPF/DKIM/DMARC using the provider's current setup instructions before higher email volume.
5. Do not start with 500 cold emails/day. Month one is manual and personalized.

9D. Stripe

1. Create a Stripe Standard account under the LLC.
2. Connect the business bank account.
3. Use invoices/payment links or connect Stripe to HighLevel if desired.
4. Charge setup fee before build starts. Set recurring monthly billing only after the client authorizes it.

9E. Make

Do nothing unless HighLevel cannot natively connect a required app. If you need it, create a Free account and build one scenario at a time. Do not use Make merely because it looks 'more AI.'

10. Exact information you must collect from every client

This is the information that makes the automation safe and useful. Do not configure from guesses.

Client Information Workbook - Section A: identity

- ☐ Legal company name
- ☐ Public/trade name
- ☐ EIN (for A2P registration - handled securely)
- ☐ Physical/mailling address
- ☐ Website domain
- ☐ Main business phone
- ☐ Public email
- ☐ Owner name
- ☐ Primary system administrator
- ☐ After-hours escalation contact

Section B: service and geography

- ☐ Every service the business DOES offer
- ☐ Every service it does NOT offer
- ☐ Towns/ZIPs/service radius
- ☐ Residential/commercial/both
- ☐ Minimum job size if the client wants one
- ☐ Emergency services offered? exactly what counts as emergency?
- ☐ Seasonal exclusions
- ☐ Licenses/certifications client wants mentioned

Section C: qualification questions

TREE SERVICE DEFAULT QUESTIONS

1. What town is the property in?
2. What do you need: removal, trimming/pruning, stump grinding, storm damage, land clearing, or something else?
3. Briefly describe the tree/problem.
4. Is there an immediate hazard such as contact with utility lines, a tree on a structure, injury or blocked public road?
5. What is the best time for the crew/office to call?
6. Optional: can you send a photo?

ROOFING DEFAULT QUESTIONS

1. Property town/address.
2. Repair, replacement, leak/storm issue, gutters, or unsure.
3. Is water actively entering the home now?
4. Roof type if known.
5. Approximate age if known.
6. Best callback/estimate time.
7. Optional photos - but AI does not diagnose from them.

Section D: schedule and routing

- ☐ Does AI book appointments directly or only create callback tasks?
- ☐ Exact calendar(s) to use.
- ☐ Estimate duration.
- ☐ Available days/hours.
- ☐ Minimum notice before an appointment.
- ☐ Travel/service-area rules.
- ☐ Maximum appointments per day.
- ☐ Who receives urgent alerts?
- ☐ Who receives normal callback tasks?
- ☐ What happens after hours?

Section E: approved business facts

- ☐ Hours
- ☐ Service area
- ☐ Free estimate policy
- ☐ Financing: AI must hand off unless client/counsel explicitly approves wording
- ☐ Warranty: only exact approved statement
- ☐ Insurance/licensing: only exact approved facts
- ☐ Typical response time wording
- ☐ Payment methods
- ☐ Languages supported
- ☐ Links to privacy policy and terms

Section F: things AI must NEVER decide

- ☐ Final price or binding estimate
- ☐ Whether a dangerous tree/roof is safe
- ☐ Electrical/utility hazards

- ☐ Emergency response guarantees
- ☐ Insurance coverage or claim outcome
- ☐ Legal responsibility/liability
- ☐ Structural diagnosis
- ☐ Financing eligibility
- ☐ Contract terms beyond approved factual language

Section G: consent and lead-source map

Lead source	What you must know before automating
Client website form	Exact form URL; SMS checkbox/disclosures; timestamp/source tracking; privacy/terms links.
Phone call	Whether text-back is approved; exact number; call routing; lawyer-approved use case.
Google/LSA/marketplace lead	What consent/data comes with the lead; platform rules; whether phone/SMS follow-up is allowed.
Existing CRM list	Source/date of each record and legal basis for contact. Do not assume an old list is safe to reactivate.
Manual referral	How consent/preference was captured and who should make first contact.

11. Build the HighLevel system step by step

Menu names can move slightly as HighLevel updates, but this is the exact architecture.

11A. Client location structure

1. Create a separate HighLevel sub-account/location for the client.
2. Settings -> Business Profile: enter public business identity, time zone, address and website.
3. Create users for the owner/office only as needed. Never share your master login.
4. Create a Pipeline named LEAD RESPONSE with stages: NEW -> AI ENGAGED -> CALLBACK NEEDED -> ESTIMATE BOOKED -> HUMAN REVIEW -> WON -> LOST.
5. Create custom fields listed below.

Required custom fields

Field	Example / purpose
Lead Source	Website Form / Missed Call / Google / Referral
SMS Consent Status	Yes / No / Unknown - never infer Yes
Service Type	Tree Removal, Pruning, etc.
Property Town	Andover
Urgency	Normal / Soon / Immediate human review
Safety Flag	None / Utility / Injury / Structure / Other
Preferred Contact	Call / Text / Email
Preferred Time	Morning / afternoon / specific slot
Photo Provided	Yes/No
AI Handoff Reason	Price / Safety / Complaint / Legal / Unclear
Last AI QA Status	Pass / Review

11B. Forms

1. Build or connect the client's estimate/contact form.
2. Collect only necessary data: name, phone, email, location, service, brief description, optional image.
3. Place clear consent checkboxes/disclosures near the form. Do not pre-check them. Use separate marketing/non-marketing consent where applicable.
4. Record the opt-in/source in the contact record.
5. Add privacy policy and terms links.
6. Test submission with your own number.

11C. Calendar

1. Create or connect the client's estimate calendar.
2. Enter real business availability, buffer time and appointment length.
3. If the client does not want automated booking, DO NOT expose calendar slots. Create callback tasks instead.
4. Use one calendar first. Add multiple calendars only after the simple version is stable.

11D. Conversation AI

1. Open the client location -> AI Agents -> Conversation AI.
2. Create an agent named '[CLIENT] Lead Response Assistant'.
3. Configure the bot basics and response delay.
4. Bot Goals: collect only the required contact/job fields.
5. Enable Appointment Booking only if the client approved direct booking and the correct calendar is connected.
6. Load approved business facts/knowledge. Do not dump the entire internet or unverified marketing copy into the knowledge base.
7. Paste the guardrails from Section 12.
8. Set human-handoff behavior.
9. Test in preview before linking the agent to live workflows.

11E. Workflow trigger

LAUNCH WORKFLOW

TRIGGER: client estimate form submitted AND SMS consent/use case is valid.

ACTION 1: create/update contact.

ACTION 2: create opportunity in NEW.

ACTION 3: send approved acknowledgement / start Conversation AI.

ACTION 4: save answers to fields.

ACTION 5: if safety/price/legal/complaint/low confidence -> HUMAN REVIEW + alert owner.

ACTION 6: if normal qualified lead -> book estimate OR create callback task.

ACTION 7: if no reply -> one approved follow-up; optional second follow-up; then stop.

ACTION 8: STOP/opt-out -> DND/suppression immediately.

12. Exact AI model choices, prompts and guardrails

12A. Your ChatGPT model

Use GPT-5.6 Sol for the high-value operator work: researching a prospect before you contact it, turning a client's messy notes into a structured configuration, auditing transcripts for failure patterns, and designing/fixing workflows. This is where stronger reasoning saves your time.

12B. HighLevel model

For ordinary workflow GPT actions, leave GPT-5 Mini selected unless you have measured a real quality problem. Current HighLevel documentation identifies GPT-5 Mini as the default for these workflow steps and prices it far below full GPT-5.

12C. Master Conversation AI instructions

COPY/ADAPT FOR EACH CLIENT

ROLE

You are the automated lead-response assistant for [CLIENT BUSINESS]. You help people who contacted the business about its services.

OBJECTIVE

Collect only the approved information needed for a human estimate/callback or, when configured, book an approved estimate slot.

IDENTITY

Never say you are a human. If asked, say you are [CLIENT]'s automated assistant.

STYLE

Short, calm, plain-English messages. Ask one question at a time. Do not pressure the person.

APPROVED FACTS

Use only the business facts and service rules supplied in this account. If a fact is missing, say a team member will confirm it.

NEVER DO

Do not give a binding price. Do not diagnose structural, electrical, tree, roof or safety conditions. Do not promise emergency arrival. Do not interpret insurance, financing or contracts. Do not invent availability.

HANDOFF

Immediately hand off for: active danger, utility/power-line issue, injury, fire/gas, tree on structure, active major water intrusion, angry complaint, legal threat, insurance dispute, price negotiation, sensitive information, or anything you cannot answer confidently.

OPT-OUT

If the person says STOP, unsubscribe, do not text, wrong number or an equivalent request, stop messaging and mark the contact as opted out.

DATA

Save: service type, town, brief problem, urgency, preferred contact method/time, photo status, and handoff reason.

FINISH

When enough information is collected, either offer approved calendar times or tell the person the team will contact them. Do not keep chatting after the task is complete.

12D. Prompt for ChatGPT to configure a new client

USE WITH GPT-5.6 SOL

I am configuring a new Granite Signal Systems client in HighLevel. I will paste the completed Client Information Workbook below.

Return:

1. approved business facts,
2. services and exclusions,
3. service-area rules,
4. qualification questions in the correct order,
5. all hard human-handoff triggers,
6. calendar/callback logic,
7. FAQs the AI can safely answer,
8. facts/questions the AI must never answer,
9. a concise Conversation AI instruction block,
10. 20 test conversations including hostile, ambiguous, STOP, pricing, safety and out-of-area cases.

Do not invent missing facts. Mark anything missing as REQUIRED BEFORE LAUNCH.

12E. Prompt for weekly transcript audit

USE WITH GPT-5.6 SOL

Audit these anonymized lead-conversation transcripts for a local contractor.

Score each conversation PASS / NEEDS CHANGE / SAFETY-COMPLIANCE REVIEW.

Look for: invented facts, excessive messages, failure to hand off, pricing promises, unsafe advice, bad booking, ignored opt-out, repetitive questions, awkward tone, or missing data.

Then give me only the smallest prompt/workflow changes needed to fix recurring failures. Do not recommend broader automation unless necessary.

13. The homeowner/lead conversation automation

This is 'outreach to your client's clients' in the launch version. It is response/follow-up to approved inbound inquiries - not random consumer prospecting.

Example - tree service web inquiry

Moment	System action	What homeowner experiences
0 min	Form creates contact/opportunity.	Nothing complicated; their request has been received.
0-2 min	Approved acknowledgement from the actual tree company.	'We received your request...' and one simple question.
Conversation	Conversation AI asks service/town/problem/urgency/preferred time.	Short one-question-at-a-time exchange.
Safety keyword	Stop normal bot flow; alert human.	No AI diagnosis. Human takes over.
Qualified	Book approved estimate OR create callback task.	Clear next step.
No response	One approved follow-up at the client's approved interval.	Reminder, not harassment.
Second no response	Optional second and final approved follow-up.	Then automation stops.
Opt-out	DND/suppression.	No more automated SMS.

What information the AI is allowed to collect

- Name/contact information already supplied or voluntarily provided
- Property town/address when needed for service
- Service requested
- Brief description
- Urgency
- Preferred callback/estimate time
- Optional photos relevant to the estimate request

What it should NOT collect

- Social Security number
- Bank password/login
- Full card information in chat
- Medical information unrelated to the service
- Detailed insurance claim strategy
- Sensitive identity documents unless a separately reviewed legitimate process requires them

14. Testing before any real person is contacted

Do not trust a bot because one demo looked good.

Run at least these 25 tests

- ☐ Normal tree-removal inquiry
- ☐ Normal pruning inquiry
- ☐ Normal stump inquiry
- ☐ Out-of-service-area town
- ☐ User gives no town
- ☐ 'How much will this cost?'
- ☐ User demands exact price
- ☐ 'Tree is touching a power line'
- ☐ 'Tree fell on my roof'
- ☐ Injury mentioned
- ☐ Angry complaint
- ☐ Threat of lawsuit
- ☐ Insurance question
- ☐ Financing question
- ☐ User says STOP
- ☐ User says 'wrong number'
- ☐ User swears / nonsense
- ☐ User asks if this is a bot
- ☐ User changes service halfway through
- ☐ User provides two properties
- ☐ User wants appointment outside hours
- ☐ No calendar availability
- ☐ User does not reply
- ☐ User replies after follow-up
- ☐ User asks unrelated question

PASS CRITERIA

No invented facts. No quote. No unsafe advice. Correct service-area decision. Correct calendar/callback result. Correct human handoff. STOP works. All collected fields save correctly. Owner receives alerts. Conversation is short and understandable.

15. NH sales machine - exact targeting, emails, calls and close

Month one is manual, local and precise. No mass blasting. Your advantage in NH is that you can sound like a real local operator who understands field-service businesses, not another national "AI agency."

15A. The exact client profile

THE TARGET

Owner-led home-service company, usually 2-25 field/office people, already receiving inbound quote/service requests, meaningful job values, field crews that cannot answer every inquiry instantly, and no obviously mature intake/automation operation.

Signal	Points	What to verify
Active quote/contact form or clear inbound call CTA	15	Website asks homeowners to request estimate/service.
At least ~20 inbound inquiries/month OR fewer but very high-value jobs	15	Ask owner; never guess from reviews alone.
Owner/crew spends substantial time in field	10	Field-service model; owner is not sitting at desk all day.
High-value service mix	10	Typical job can economically justify \$497-\$797/mo.
After-hours / emergency / storm demand	10	Creates real response gaps.
Owner-led / small office	10	Decision maker is reachable; limited intake staffing.
No visible instant qualification/booking	10	Website lacks obvious mature chat/booking process.
Strong reputation / 15+ real reviews	5	Signals real demand and a business worth helping.
Local service area, not national franchise	5	Better control and faster owner decision.
Clear service area + service menu	5	Easy to configure safely.
No evidence of chronic complaints / chaos	5	You want operationally competent clients, not rescue projects.

Score 75-100 = A lead. 60-74 = B lead. Under 60 = do not spend manual sales time until the A/B list is exhausted. The lead-volume and operational questions must be confirmed with the owner before signing.

Best niches in order

Priority	Niche	Why it fits	Watch-out
1	Tree service / land clearing	Field crews, storm demand, large-ticket work, simple first qualification.	Safety and utility-line issues always go human.
2	Septic / drain / pumping	Urgency, owner-operator shops, repeat maintenance + high-ticket repairs.	Do not diagnose failure or quote from AI.
3	HVAC / plumbing	Strong urgency and replacement/repair economics.	Some firms already have dispatch software and staffed phones.
4	Roofing / exteriors	High ticket and quote forms are common.	Larger roofers may already have call centers/CRMs.
5	Well / pump / water treatment	Urgent no-water situations and valuable installs.	Service-area and emergency rules must be precise.
6	Excavation / sitework	High-value inquiries; owners are frequently in field.	Lower lead volume; qualify economics first.

Do NOT automatically reject a contractor because it appears on Angi, HomeAdvisor, Thumbtack or another lead source. V1.0 was too strict here. Paid lead sources can make fast intake more valuable. Reject only when the business already has the response process handled or the economics are poor.

15B. Territory strategy - small towns first

Wave	Towns/area	How to use it
Wave 1 - local trust	New London, Andover, Wilmot, Sutton, Newbury, Sunapee, Warner, Bristol, Franklin, Danbury	Start here. Owner access and local identity are strongest; use "I work with NH field-service companies" and real website observations.
Wave 2 - central NH	Plymouth, Meredith, Laconia fringe, Northfield, Hopkinton, Henniker, Weare, Concord fringe	More business density while still retaining owner-led shops.
Wave 3 - Manchester fringe	Goffstown, Hooksett, Auburn, Candia, Bedford, Londonderry, Merrimack	Use for volume. Target smaller operators, not the heavily staffed 24/7 regional brands.
Wave 4 - rest of NH	Upper Valley, Monadnock, Seacoast outskirts	Expand only after the first case study and the onboarding template are stable.

Why small towns can be better: you are more likely to reach the owner, local reputation matters, and many shops are operationally sophisticated in the trade but not interested in building AI/CRM workflows. The trade-off is market size. To reach 30 clients, you will probably need central/southern NH volume as well as the New London/Andover corridor.

15C. Exact prospect-building workflow - 12 businesses per weekday

- 1. Pull candidates from Google Maps plus the Kearsarge Area Chamber, Lake Sunapee Region Chamber, Greater Concord Chamber and Greater Manchester Chamber directories.
- 2. Open the business website. Record: owner/decision-maker if public, public business email, phone, quote/contact form, opening hours, service area, service list, emergency language and any visible booking/chat/CRM clues.
- 3. Score the prospect using the 100-point table above. Keep A and B only.
- 4. Write ONE sentence of evidence: "Your site has a Request A Quote form and says Mon-Fri 8-6" or "You advertise 24/7 septic emergencies across Andover/New London." This becomes the first-email personalization.
- 5. Never invent that they miss leads. Your email says what you observed and asks what happens when a request arrives while the crew is occupied.
- 6. Add the prospect to a simple pipeline: RESEARCHED -> EMAIL 1 -> CALLED -> FOLLOW-UP -> DEMO -> PROPOSAL -> WON/LOST.
- 7. Stop after the final follow-up unless they engage. Do not become the spammer you are claiming to replace.

CHATGPT PROSPECT QUALIFICATION PROMPT

"Research this NH service business using only current public information I provide or link. Score it 0-100 using my Granite Signal Systems ICP: inbound quote flow, field-based operation, high-value services, owner accessibility, after-hours urgency, limited visible intake automation, local reputation and clear service area. Separate VERIFIED FACTS from INFERENCES. Give me: score, best sales angle, one exact website observation, likely objection, and what I must ask the owner before deciding it is qualified. Never claim the company misses leads unless there is evidence."

15D. The exact five-touch cadence

Day	Action	Goal
0	Email #1 between roughly 8:00-10:30am local.	Earn a 10-12 minute demo, not close the deal by email.
1	Call the business. If owner unavailable, ask best time to reach whoever handles new estimate requests.	Get a real intake answer and owner contact path.
3	Email #2 with a concrete 2-minute demo offer.	Reduce perceived commitment.
7	Call again + Email #3 with pilot price and implementation guarantee.	Force a clear yes/no on demo.
12	Final "close the file" email.	Create a clean endpoint; no endless follow-up.

15E. Exact email copy - use this wording

EMAIL #1 - BEST DEFAULT | Subject: quick question about your estimate requests

Hi [FIRST NAME] -

I'm in New Hampshire and I work with owner-led service companies that already get their own quote/service requests.

I noticed [ONE TRUE OBSERVATION - e.g., "your site has a Request A Quote form and you cover New London/Andover"].

The problem I solve is the gap between that inquiry arriving and somebody on the crew actually having time to respond. Granite Signal Systems installs a managed response layer that can acknowledge the request immediately, collect only the job details you approve, and put a clean callback or estimate in front of you. It does not quote the job, give safety advice, or replace you.

You could build pieces of this yourself with AI. What I handle is the setup, integrations, guardrails, testing, monitoring and ongoing fixes so it is one less system for you to babysit.

I can show you the whole thing in 10 minutes using a fake customer - no access to your systems. Worth seeing?

[YOUR NAME]
Granite Signal Systems
[PHONE]
[VALID POSTAL ADDRESS]

Advertisement/business solicitation. If you do not want future outreach from me, reply "no" and I will remove you.

EMAIL #2 - DAY 3 | Subject: re: estimate requests

[FIRST NAME] - one reason I reached out to you specifically is [OBSERVATION].

I'm not proposing more leads or another ad service. I'm proposing better handling of the inquiries you already paid for or earned.

The demo is simple: fake homeowner request -> immediate approved questions -> service-area/urgency check -> callback or estimate task on your side. Then I show you the hard stops for pricing, emergencies and anything the system should not answer.

If you want, I'll send a 2-minute screen recording first. If it looks useless, we stop there.

Should I send it?

[YOUR NAME]
[FOOTER/POSTAL ADDRESS + OPT-OUT]

EMAIL #3 - DAY 7 | Subject: 30-day pilot for [BUSINESS NAME]

[FIRST NAME] - last practical detail in case the idea is interesting but you do not want a big software project.

For the first NH pilot clients, I'm doing one channel for \$300 setup + \$397 for 30 days. We configure it around your real service area and questions, run the written test set before launch, and you can stop after the pilot. I do not guarantee jobs or revenue.

The implementation promise is simpler: after you provide the needed access and approvals, the agreed workflow either passes the acceptance tests or I keep fixing it at no extra setup charge / refund the setup fee under the order-form terms.

If you have 10 minutes this week, I can show you exactly what the homeowner sees and what lands on your side.

Tuesday [TIME A] or Wednesday [TIME B]?

[YOUR NAME]

[FOOTER/POSTAL ADDRESS + OPT-OUT]

EMAIL #4 - DAY 12 | Subject: close the file?

[FIRST NAME] - I do not want to keep chasing you.

Should I close this out, or is faster handling of incoming estimate/service requests something you would actually want to see?

If it is already handled well, just reply "handled" and I'll leave you alone. If it is a problem, reply "demo" and I'll send the 2-minute version.

[YOUR NAME]

[FOOTER/POSTAL ADDRESS + OPT-OUT]

Three highly targeted examples

LAKE SUNAPEE TREE SERVICE - Tim & Melynda | Public business email:

lakesunapeetreeservice@gmail.com | Subject: question about your quote requests

Hi Tim & Melynda -

I'm in New Hampshire and noticed Lake Sunapee Tree Service already sends homeowners to a Request A Quote flow, lists Mon-Fri 8-6 hours, and advertises 24/7 storm response across the Kearsarge/Andover area.

That combination is exactly why I'm reaching out: when a quote request lands while everyone is on a job - or after normal office hours - the homeowner is still actively looking.

Granite Signal Systems installs and manages a response layer that can immediately acknowledge the request, collect the tree-work details you approve (town, service, urgency, photos, preferred callback time), and hand your team a clean estimate/callback task. It never quotes tree work or gives safety advice; storm, power-line and dangerous situations go straight to a human.

You could build the pieces yourself. I handle the configuration, testing, guardrails and monitoring so you do not have to babysit it.

I can show you a 10-minute fake-customer demo built around tree-service inquiries. Worth seeing?

[YOUR NAME]

Granite Signal Systems

[PHONE]

[VALID POSTAL ADDRESS]

Advertisement/business solicitation. Reply "no" and I will not follow up.

LAKE'S SEPTIC SERVICE - Connar/Kaitlyn | Use current public business contact | Subject: quick idea for your Andover/New London estimate requests

Hi Connar & Kaitlyn -

I saw that Lake's Septic is family-owned, serves Andover/New London/Wilmot/Bristol and surrounding towns, has a Get Estimate flow, and handles emergency septic calls.

I run Granite Signal Systems in NH. I do not sell leads. I install the response system that sits behind the leads you already get: immediate acknowledgment, a few approved questions, service-area/urgency capture, then a callback or estimate task for you.

For septic work the guardrails matter: the system does not diagnose failures or quote repairs. Anything urgent, unsafe or uncertain gets handed to a person.

If I send you a 2-minute demo using a fake "septic backup in Andover" inquiry, would you take a look?

[YOUR NAME]

[VALID POSTAL ADDRESS + OPT-OUT]

SMITH RIVER HVAC - Public business contact | Subject: your free-quote requests

Hi Smith River HVAC team -

I noticed your site actively drives people to free installation quotes and service requests across Bristol, Plymouth and the Lakes Region, with weekday hours posted.

I run Granite Signal Systems in NH. The service is not another lead source: I install and manage the layer that responds to an inbound request immediately, collects the approved HVAC basics, and routes a clean callback/estimate to your team while technicians are tied up.

If you already have every inquiry handled in minutes, you probably do not need me. If there is still phone tag or after-hours delay, I can show you a 10-minute demo with a fake heat-pump inquiry - no system access needed.

Worth seeing?

[YOUR NAME]

[VALID POSTAL ADDRESS + OPT-OUT]

15F. Exact call opener and discovery

CALL OPENER

"Hi, is this [OWNER/FIRST NAME]? This is [YOUR NAME] with Granite Signal Systems here in New Hampshire. I'm not selling leads or ads. I noticed [TRUE WEBSITE OBSERVATION]. I install a small intake system for field-service companies so an estimate request can be acknowledged and organized while everyone is tied up on jobs. Can I ask you one question - what happens today if a new quote request comes in at 7:30 at night or while everybody is out in the field?"

Ask only what you need to diagnose the pain

- Roughly how many new calls/forms/quote requests hit in a normal week?
- Who sees them first?
- How fast do you usually respond during the day? What about evenings/weekends?
- What happens if the first callback does not connect?
- What software do you already use: Jobber, Housecall Pro, ServiceTitan, HighLevel, answering service, shared inbox, something else?

- Where do requests get annoying or fall through - phone tag, missing job details, wrong towns, after-hours, forgotten callbacks?
- Do you want appointments booked automatically, or would you rather receive a clean callback task and decide yourself?
- What is a typical job worth in broad terms - hundreds, low thousands, several thousand+? I only want to recommend this if the economics make sense.

DEMO ASK

"That helps. I do not need access to anything to show you the idea. Give me 10-12 minutes and I'll run a fake customer through it, then show you exactly what your side sees. If it looks like software theater, we stop. Is [specific day/time] or [specific day/time] easier?"

15G. The 12-minute demo that closes

Minute	Show	What you say
0-1	Restate their problem	"You said the gap is [after-hours / phone tag / missing details]. I built the demo around that."
1-4	Fake homeowner submits inquiry	Use their real public services/towns, but clearly label it a sandbox/fake customer.
4-7	AI asks approved questions	Show short messages, one question at a time, and a safe handoff case.
7-9	Owner dashboard	Show the captured fields, pipeline stage, alert and callback/estimate task.
9-10	Guardrails	Show pricing refusal, emergency handoff and STOP behavior.
10-11	Economics	Ask: "If this prevented one worthwhile request a month from going cold, would \$497-\$697 be rational for you?" Do not tell them it will.
11-12	Close	Offer the 30-day pilot or standard package; then stop talking.

EXACT PILOT CLOSE

"Based on what you told me, I would start with one channel, not rebuild your whole office. The founding pilot is \$300 setup and \$397 for 30 days. You give me the approved business facts and access, I build it, run the written test set with you, and we launch only after it passes. No job or revenue guarantee. Do you want me to send the one-page order form and onboarding sheet, or is there something you need to be comfortable first?"

15H. Objections - exact responses

Objection	Answer
"I can just use ChatGPT."	"You can. I am not selling ChatGPT access. The paid part is wiring your real intake process together, constraining what it can say, testing edge cases, monitoring failures and maintaining it when your hours/services change. If you want to build and own that internally, you should."
"We already use Jobber/ServiceTitan/Housecall."	"Good - I would rather integrate with a system you already use than replace it. The question is whether every inbound request gets an immediate, structured first response and lands in that system correctly."
"My wife/receptionist answers the phone."	"Then the system should support her, not replace her. The value is the times she is already on a call, away, after-hours or needs the job details collected before calling back."
"AI will say something stupid."	"That is why I do not let it quote, diagnose dangerous conditions or invent facts. We give it a narrow job, test hostile/ambiguous cases and route uncertainty to a person."
"\$697 is too much."	"Then we should not force it. What is a normal gross profit on a worthwhile job? If one additional recovered job would not comfortably cover the fee, you are probably too small for this package right now."
"We already answer quickly."	"Then I may not have a problem to solve. If you are consistently handling inbound requests in minutes, after-hours included, and tracking follow-up, I would not recommend adding another system."
"I need to think about it."	"Of course. What specifically needs thinking - trust in the automation, price, integration, or whether you have enough missed-response pain? If I know that, I can either answer it or leave you alone."

15I. Local channels that are harder for national AI agencies to copy

- Chamber directory mining: Kearsarge Area Chamber and Lake Sunapee Region Chamber first; Greater Concord and Greater Manchester for scale. These are current, local lists where owner names and business categories are often visible.
- Supplier/referral network: ask every happy contractor, bookkeeper, web designer, insurance agent and local business owner for two field-service owners who are busy enough to hate phone tag. Referrals should become your highest-close-rate channel.
- Personalized 2-minute video: after a prospect engages, record a sandbox using only public services/towns and a fake customer. Do not ask for passwords or live access to prove the concept.
- "Response Audit" offer: on the call, map exactly what happens to a web form, missed call and after-hours inquiry. Sell the missing process, not the chatbot.
- Seasonal/storm campaigns: before foliage/storm, winter freeze and heating seasons, contact tree, septic and HVAC prospects with a timely "what happens when five requests hit at once?" angle.

- Client referral ask on day 30: "Who are two good contractors you know who are busy enough that phone tag is a problem?" Ask only after you have produced a clean result.

16. NH territory strategy and live prospect examples

Public fit screen refreshed August 20, 2026. This is a prospecting list, not a claim that any company is missing leads or lacks software. Re-check the site immediately before outreach and ask the owner what is actually happening.

Priority	Business / area	Public signal	First angle
A	Lake Sunapee Tree Service - Wilmot / New London / Andover 603-960-1930	Family-owned; Request A Quote; Mon-Fri 8-6; 24/7 storm response; Kearsarge/Andover service area.	"What happens to quote/storm requests while crews are on jobs or after 6?"
A	Lake's Septic Service - Andover/New London/Bristol area 603-877-8509	Family-owned; Get Estimate; emergency service; broad central-NH service area.	"Could an intake layer collect town/problem/urgency before you call back?"
A	Evergreen Drain and Septic - Alexandria/Bristol 603-977-9037	Local septic/drain operator; urgent frozen-line/septic situations; weekday hours.	"How are urgent/off-hours requests captured when you are already on a job?"
A/B	Smith River HVAC - Bristol/Plymouth/Lakes Region 603-217-0851	Locally owned; active free-quote and service-request CTAs; weekday hours; HVAC install/repair.	"You already generate quote requests - I handle the first response/qualification layer."
B	Rick Sorger's Professional Heating & Air Conditioning - New London 603-558-0647	Small owner-operator style HVAC business; field-based work; weekday hours.	Lead with owner time and field interruptions; ask lead volume before demo.
B	Newfound Plumbing & Heating - Bristol 603-744-5198	Long-running plumbing/HVAC firm; established local demand; weekday hours.	Ask who handles service requests when office/techs are tied up.
B	Clayton A. Miller Inc. - Elkins/New London 603-526-4710	Long-running locally owned plumbing/heating contractor; 24-hour listing.	Do not assume pain; ask how 24-hour intake is staffed and whether requests are structured.
B	Capitol Roofing - New London 603-931-2090	High-review roofing contractor; free-quote positioning; meaningful job values.	Ask whether web/after-hours estimate requests already receive immediate structured follow-up.
B	Gills Professional Tree Care - Weare 603-724-8072	Local tree company, emergency/service work, strong reputation.	Tree-service sandbox; emphasize human handoff for hazard/power-line cases.
B	Above & Below HVAC - Northfield/Franklin 603-293-6446	Small locally owned HVAC contractor; 24-hour listing; strong reviews.	Ask whether 24-hour means live intake or callback; qualify existing process.

Priority	Business / area	Public signal	First angle
B	Cardigan Mechanical - Canaan/Upper Valley 603-252-1588	Small family-owned HVAC/plumbing company; 24-hour listing; high-value work.	Qualify office coverage and current CRM; show integration not replacement.
B	6-0-TREE - Lebanon/Upper Valley 603-573-0989	Tree service with emergency work and property maintenance.	Use storm/after-hours response angle; ask monthly inquiry volume.

Prospect sources you should mine every week

- Kearsarge Area Chamber member categories: builders/contractors, electrical, landscaping, plumbing/HVAC, septic, solar and related trades.
- Lake Sunapee Region Chamber home-services category and advanced business search.
- Greater Concord Chamber construction/member directory for central-NH volume.
- Greater Manchester Chamber construction/home-and-garden categories for southern-NH volume.
- Google Maps: search niche + town; then open the real website and score with the ICP. Reviews identify active businesses but do not prove intake pain.

17. Exact operating calendar + 30-client conversion math

Your previous target was 30 clients by December. Treat it as a stretch operating target, not a guaranteed outcome. The correct success percentage to internalize is a funnel assumption with a clearly defined denominator.

THE PLANNING NUMBER TO INTERNALIZE

Use 3% as the base planning conversion from a FULLY QUALIFIED A/B PROSPECT that receives the complete personalized outreach sequence to a paid client. Early/no-proof range: ~1-3%. After a real case study and sharper targeting: ~3-5%. Demo-held close assumption: ~25-45%. These are planning assumptions, not NH market statistics. Replace them with your own numbers after the first 100 prospects.

Paid-client target	At 2% prospect->client	At 3% base	At 5% strong execution
5	250 prospects	167 prospects	100 prospects
10	500	334	200
20	1,000	667	400
30	1,500	1,000	600

What 30 by December actually requires

From late August to mid-December is roughly 16-17 selling weeks. At the 3% planning rate, 30 clients requires about 1,000 fully researched accounts receiving the full sequence - roughly 59 per week, or about 12 per weekday. At 5%, it is about 600 accounts - roughly 7 per weekday. This is why you need an assistant-driven research pipeline plus New London/Andover AND central/southern NH; a handful of local tree companies is not enough.

Do not try to improve the math by blasting worse prospects. Improve it by getting proof, qualifying harder, calling after the email, and generating referrals.

First 30 days - exact execution

Days	Owner / closer	Secretary / assistant	Definition of done
1-3	Finish demo, website, order form, 10-minute presentation and payment link. Practice call script aloud.	Build first 60 A/B prospects with owner/contact/observation/score.	System can be demonstrated from fake inquiry to owner task without errors.
4-10	Send 12 personalized emails/day; call previous-day prospects; hold demos.	Research next 12/day, update pipeline, schedule follow-ups.	84+ researched contacts touched; first demos booked.
11-17	Continue cadence; close founding pilot; onboard immediately.	Keep prospect pipeline full; prepare demo notes from each website.	First paying pilot + 150-175 cumulative prospects.
18-24	Operate pilot, collect baseline response metrics, keep selling.	QA logs, prospecting, follow-ups.	Pilot stable; case-study data beginning.
25-30	Ask pilot client for testimonial/referrals if deserved; sell proof, not promises.	Package screenshots/metrics with permission; continue 12/day.	250+ cumulative researched prospects and a measured conversion baseline.

Weekly scoreboard

Metric	Weekly target before proof	Why
New A/B prospects researched	60	Maintains enough volume for a 3% model.
Email #1 sent	60	Every record receives a true observation.
Calls	40-60	Email alone is not the strategy; reach the owner.
Meaningful owner conversations	10+	The real leading indicator.
Demos held	3-6	At 25-45% demo close, this supports ~1-2 wins/week once fit improves.
Paid clients	0-1/week initially; 1-2/week after proof	Do not expect a smooth linear ramp from day one.
Referral asks	Every satisfied client at day 30	Warm introductions reduce cold-prospect volume.

Metric	Weekly target before proof	Why
WHEN TO UPDATE THE "SUCCESS RATE" After 100 completed prospect sequences, calculate: paid clients / 100. Also separately calculate demos / prospects and paid clients / demos. If prospect->client is under 1%, do not just send more: inspect targeting, first line, call follow-up, demo quality, offer and price. If demo->client is healthy but few demos happen, the problem is outreach. If many demos happen but few close, the problem is qualification, trust or offer.		

18. Client onboarding and launch

Do not begin setup until you have

- ☐ Signed MSA/SOW
- ☐ Setup payment
- ☐ Client Messaging & Consent Attestation
- ☐ Completed Client Information Workbook
- ☐ Approved services/service area
- ☐ Approved FAQ/business facts
- ☐ Calendar/callback rules
- ☐ Human escalation contacts
- ☐ Approved form/SMS wording
- ☐ Required access via user invite - not passwords sent by email/text

A2P information the client must supply

- ☐ Exact legal business name matching EIN records
- ☐ EIN/tax ID
- ☐ Business type/entity
- ☐ Business address
- ☐ Website
- ☐ Business contact email and phone
- ☐ Messaging use case
- ☐ How recipients opt in
- ☐ URLs/screenshots of opt-in form
- ☐ Sample messages
- ☐ Privacy Policy URL
- ☐ Terms URL
- ☐ Expected message frequency/use
- ☐ Opt-out/help process

Launch rule

ONE CHANNEL FIRST

Start with the cleanest approved web-form inquiry source. Watch live behavior. Do not simultaneously turn on website form, missed-call text, dormant leads and voice. Add one source only after the first source behaves correctly.

19. Daily and weekly operation

Your job becomes exception management.

Daily - each client

- ☐ Check failed workflows/messages.
- ☐ Check human handoff queue.
- ☐ Confirm opt-outs are suppressed.
- ☐ Spot-check conversations.
- ☐ Confirm estimate/callback tasks reached the client.
- ☐ Log any new AI failure pattern.

Weekly

- ☐ Count inbound inquiries.
- ☐ Measure first-response time where possible.
- ☐ Count conversations engaged.
- ☐ Count estimate bookings/callback tasks.
- ☐ Review human handoffs.
- ☐ Review opt-outs/complaints/errors.
- ☐ Use ChatGPT transcript-audit prompt on anonymized examples.
- ☐ Make ONE controlled improvement and test it.

Monthly report

Metric	What to report
Inquiries	Count by source.
Response	Median/average response time where measurable.
Engaged conversations	Number who replied/continued.
Estimate/callback outcomes	Booked or routed - not claimed revenue unless client verifies it.
Human handoffs	Count and common causes.
Opt-outs/errors	System/compliance health.
Next change	One specific improvement.

20. Profit model, take-home scenarios and scaling

These are planning models, not forecasts. The most important distinction is revenue vs operating profit vs cash after a tax reserve. Your actual taxes depend on entity structure, other income and deductions.

20A. Current core platform economics

Cost item	Planning amount	Notes
HighLevel Starter	\$97/mo	Current public plan includes up to 3 sub-accounts. With one demo, it realistically carries only the first two live clients.
HighLevel Unlimited	\$297/mo	Current public plan supports unlimited sub-accounts. Upgrade when the third live client requires it.
ChatGPT Plus	\$20/mo	Operator research/configuration/QA; separate from customer-facing HighLevel usage.
HighLevel AI Employee Growth	\$50/client/mo	Current plan includes 1,000 Conversation AI agent responses/month plus included AI features; use pay-per-use instead if cheaper for a low-volume client.
Phone / SMS allowance	\$15/client/mo planning reserve	Actual usage varies. Local numbers currently list at \$1.15/mo plus usage/carrier/A2P charges.
Card processing	~\$20.51 on a \$697 invoice	Illustration using 2.9% + \$0.30 domestic card pricing; ACH or different processors change this.
Other fixed overhead	\$250-\$300/mo reserve	Domain/email, bookkeeping, insurance/legal reserve and small tools. Replace with actual bills.

Conservative recurring-profit model

For simple planning, assume every client pays only \$697/month even though later clients may be \$797. Assume fixed overhead of \$600/month once scaled and direct/usage/payment cost of \$95 per client/month. This intentionally avoids pretending every dollar of MRR is profit.

Clients	MRR @ \$697	Modeled monthly costs	Operating profit before tax	30% tax reserve	Cash after reserve*
1	\$697	\$445	\$252	\$76	\$176
3	\$2,091	\$885	\$1,206	\$362	\$844
5	\$3,485	\$1,075	\$2,410	\$723	\$1,687

Clients	MRR @ \$697	Modeled monthly costs	Operating profit before tax	30% tax reserve	Cash after reserve*
10	\$6,970	\$1,550	\$5,420	\$1,626	\$3,794
20	\$13,940	\$2,500	\$11,440	\$3,432	\$8,008
30	\$20,910	\$3,450	\$17,460	\$5,238	\$12,222

*Before paying yourself a separate wage, adding employees/VA costs, or accounting for unusual support/legal expenses. The 30% line is a cash-reserve placeholder, not tax advice.

At 30 clients under this intentionally conservative model: about \$20,910 MRR, about \$17,460 monthly operating profit before tax reserve, and about \$12,222 remaining after a 30% reserve. If you add a \$1,500/month VA/support budget at that point, the after-reserve cash falls to roughly \$11,172.

20B. One-time setup cash on the pricing ladder

Clients accumulated	Setup-fee assumption	Cumulative setup revenue
3	3 founding clients x \$300	\$900
10	plus 7 core clients x \$750	\$6,150 total
20	plus 10 proven clients x \$1,000	\$16,150 total
30	plus another 10 x \$1,000	\$26,150 total

Setup fees are not pure profit: they pay for onboarding work, testing, payment fees and the inevitable exceptions. Do not spend them as if they were recurring income.

20C. Target blended pricing after proof

If the first 3 clients remain at \$497, clients 4-10 are \$697 and clients 11-30 are \$797, the 30-client blended MRR is about \$22,310/month (average ~\$744/client). Using the same \$600 fixed + \$95/client cost assumption, modeled operating profit is about \$18,860/month before tax reserve. Keep the conservative \$697 model for planning until customers actually pay the higher tier.

20D. What 30 clients means operationally

- 30 client accounts is not "push a button and forget it." Standardization makes it light, but somebody still owns QA, client changes, failed automations, billing and support.
- By 10 clients: template onboarding, required-information workbook, standard acceptance test and monthly report must be fixed.
- By 15-20 clients: add a part-time assistant/VA for prospect research, CRM hygiene, screenshots, report assembly and routine ticket triage. Keep technical changes and client promises under your control.

- By 30 clients: do not accept custom workflows unless priced separately. The standard product is what protects profit margin.
- Upgrade to HighLevel Unlimited when the sub-account limit requires it. Do not buy Agency Pro just because revenue increased; buy it only if SaaS/rebilling/advanced features actually reduce work or create margin.

THE PROFIT RULE

Recurring gross margin is protected by saying "no" to low-fit clients and custom one-off builds. The business works when the same tested intake architecture is cloned, filled with each contractor's approved facts, connected, tested and monitored - not when every new customer becomes a bespoke software project.

21. What can go wrong

1. Mass consumer texting without the right consent/use case.
2. AI voice launched without specific legal/compliance review.
3. AI invents a price or safety answer.
4. Client feeds you an old scraped list and calls it 'our leads.'
5. Form consent is missing/ambiguous or the checkbox is preselected.
6. A2P registration data does not match legal/EIN/public website information.
7. Client changes their form/offer without telling you.
8. AI books impossible times because calendar rules are wrong.
9. Owner does not follow up on the qualified lead, then blames the system.
10. You promise revenue you cannot control.
11. Every client gets a custom build and your workload explodes.
12. You buy expensive sales/AI tools before one customer pays you.
13. You claim a prospect is 'not on Angi' based solely on a web search.

22. Source and verification notes

Current web/official material checked August 20, 2026. Re-check prices, rules and prospect facts immediately before acting.

FINAL OPERATING SUMMARY

1. Form the company.
2. Buy only ChatGPT Plus + HighLevel Starter + basic business email/domain.
3. Build one safe form-response demo.
4. Sell manually to field-service contractors.
5. Collect the Client Information Workbook - never configure from guesses.
6. Use HighLevel Conversation AI for approved live lead conversations.
7. Keep prices/safety/legal/insurance and low-confidence cases human.
8. Test hard before launch.
9. Make the first client work.
10. Turn the working configuration into a template, then scale.

This document is a business execution plan, not legal, tax or guaranteed-income advice. Cold commercial email must comply with CAN-SPAM; the FTC states the rule applies to B2B commercial email and requires accurate headers/subjects, identification as an advertisement, a valid postal address, an opt-out mechanism and prompt honoring of opt-outs. Communications law, carrier rules, AI pricing and platform policies change. Have qualified counsel review your real outreach, messaging consent and client agreements.
